By providing equitable opportunities, all children, regardless of ability, race, ethnicity, language, and cultural background, will be able to participate in STEM (Clements et al., 2021).

Individualizing instruction on STEM knowledge for students with learning differences increases student achievement (Kasee & Rayfield, 2019).

Students with disabilities want careers in STEM fields (Bittinger, Wells, & Kimball, 2021).

ALL CHILDREN, REGARDLESS OF ABILITY, CULTURE, RACE/ETHNICITY, GENDER, AGE, AND/OR SOCIOECONOMIC STATUS, HAVE THE INTEREST AND CAPACITY TO ENGAGE IN STEM LEARNING EXPERIENCES.

WHAT CAN I DO TO CULTIVATE STEM EXPERIENCES FOR ALL?

1. Follow the child’s lead and interests.

STEMIE Resource: A Guide to Teaching Practices

STEMIE’s Curated Book Lists about STEM Innovators from multiple cultures
By following children’s interests, adults can engage in responsive interactions and necessary adaptations to support all children, including children with invisible disabilities.

1. By planning learning experiences based upon children’s interests, we can ensure that teaching and learning is meaningful and relevant to all children (Birbili, 2019; Dunst et al., 2011).

2. Children’s interests and adult interaction styles are important factors in the development of early numeracy skills (Lukie et al., 2014).

3. Understanding children’s strengths and interests can help adults support their development and learning (NAEYC, 2020).

What Can I Do To Cultivate STEM Experiences for All?

Reflect on your beliefs and bias about children with disabilities.

STEMIE PD Series: Adaptations for Everyday Routines & Activities: Making STEM Happen for Infants & Toddlers

Cultivating STEM learning opportunities for ALL young children throughout their daily routines and activities in any environment.
Students with learning differences included in general education settings achieved higher on reading and math assessments than students in non-inclusive settings. (Cole, Murphy, & Robinson, 2022).

When high expectations are infused into classroom practices, these can potentially have a positive impact on the development of children who are deaf or hard of hearing (Wang et al., 2014).

When a culture of high expectations is established for STEM learning, students seem to have positive beliefs about their ability to do STEM (Murphy, 2020).

ALL YOUNG CHILDREN ARE CAPABLE OF LEARNING AND ACHIEVING SUCCESS, AND THEY LEARN BEST WHEN ADULTS IN THEIR LIVES HOLD THEM TO HIGH EXPECTATIONS.

WHAT CAN I DO TO CULTIVATE STEM EXPERIENCES FOR ALL?

1. Reflect on your beliefs and bias about children with disabilities.

2. Video: STEM Starts Now

3. Videos: Why Inclusion

Early Childhood Recommended Practices Module: Interaction
Cultivating STEM learning opportunities for ALL young children throughout their daily routines and activities in any environment.

**Children learn in the context of supportive communities, through positive interactions with peers and adults.**

1. The interaction between parents and their children (e.g., math talk) provides children with opportunities to engage in math learning in a naturalistic context, such as mealtimes, (Susperreguy & Davis-Kean, 2016).

2. Teachers who provide a supportive learning environment to students with disabilities lead to higher levels of engagement in STEM courses (So et al., 2022).

3. Supporting peer interactions during STEM activities might lead to positive math learning outcomes (Trawick-Smith et al., 2017).

Cultivating STEM learning opportunities for ALL young children throughout their daily routines and activities in any environment.

While all children are motivated to learn, children who are from underserved communities and/or with disabilities are often denied opportunities to reach their full potential.

1. Children in rural communities experience challenges gaining access to EI services and receiving ongoing support from qualified EI providers, which suggest that they may be less likely to experience positive outcomes (Mello et al., 2016).

2. Children of migrant and seasonal farmworkers face challenges finding qualified teachers to support their education needs (Rivera-Singletary & Cranston-Gingras, 2020).

3. Immigrant children with disabilities face challenges accessing support and services because of language barriers (Khanlou et al., 2015).

STEM4EC Blog: Perspectives: Inclusion Right from the Start
Enrolling in high-quality education leads to many benefits, such as children’s cognitive and achievement outcomes (Morgan, 2019).

Early childhood teachers’ instructional quality predict children’s mathematic development (Pohle et al., 2022).

High-quality teacher-child interactions benefit children’s academic outcomes, such as language and literacy outcomes (Cash et al., 2019).

WHAT CAN I DO TO CULTIVATE STEM EXPERIENCES FOR ALL?

1. Children are learning all the time. Informal learning inspires and cultivates interest in STEM through real-world situations (Berger et al., 2020; Blanchard et al., 2020; Jong et al., 2020).

2. Natural outdoor environment provides an ideal setting for children to learn about science by asking questions and investigating the surrounding (Skalstad & Munkenye, 2021).

3. Activities outside of school play a critical role in cultivating STEM education (Afterschool Alliance, 2016).

MEANINGFUL LEARNING CAN HAPPEN OUTSIDE THE CLASSROOM SETTING, SUCH AS AT HOME AND IN THE COMMUNITY (E.G., MUSEUMS, GROCERY STORE, OUTDOORS).

**WHAT CAN I DO TO CULTIVATE STEM EXPERIENCES FOR ALL?**

1. Playful learning experiences that are joyful, meaningful, socially interactive, actively engaging, and iterative can promote deeper learning (Zosh et al., 2017).

2. Outdoor free play may support children’s executive function (Koepp et al., 2022), which is a critical foundational skill for STEM learning.

3. Children engage in engineering learning while playing with blocks (Gold & Elicker, 2020).

**Children learn through play and in fact, play is critical and supports children’s joyful, ‘hands-on’ exploration and learning across all domains of development (e.g., cognitive, social-emotional, physical, executive function, language and literacy, and STEM).**

**The LEGO Foundation:** Learning Through Play

**Developmentally Appropriate Practice (DAP) Position Statement**
Reseasrch suggests that adult-guided play (e.g., scaffolding, intentional teaching) is effective for improving children’s academic achievement and quality of young children’s play.

1. With intentional adult guidance, motor play has the potential to improve all children’s social, communication, pre-academic, and approach to learning skills (Yang & Ostrosky, 2023).

2. With adults’ support and scaffold (e.g., embedding STEM talk into storybook reading), children can engage in STEM understanding and thinking (David et al., 2021; Leech et al., 2020).

3. Adult-child interactions during block play may promote learning in spatial concepts (Ferrara et al., 2011)

Integrating math, science, and technology in early childhood education leads to positive changes in children’s STEM development (Kermani & Aldemir, 2015).

Programming robots can be a useful tool to support children’s science and engineering learning (Çetin & Demircan, 2020).

Children can engage in math and engineering learning during block play (Gold & Elicker, 2020; Gold et al., 2020).

What Can I Do To Cultivate STEM Experiences for ALL?

STEM STANDS FOR SCIENCE, TECHNOLOGY, ENGINEERING, AND MATH. IN EARLY CHILDHOOD, STEM LEARNING CAN BE INTEGRATED WITH AT LEAST TWO OR MORE DOMAINS IN AN INTENTIONAL, HANDS-ON APPROACH.
Cultivating STEM learning opportunities for ALL young children throughout their daily routines and activities in any environment.

WHAT CAN I DO TO CULTIVATE STEM EXPERIENCES FOR ALL?

1. Young children (0-5) more readily develop computational thinking skills when engaged in unplugged activities (i.e., activities that do no involve electronics; Bati, 2022).

2. Children can engage in computational thinking learning through unplugged, hands-on, and play-based learning activities (Lee et al., 2023).

3. Computational thinking is the process of applying principles of computer science to solve problems (Aho, 2012).

TECHNOLOGY IS THE INTRODUCTION OF UNDERLYING CONCEPTS OF BUILDING OR CREATING TECHNOLOGY, INCLUDING COMPUTATIONAL THINKING (DOE & DHHS, 2016).

Patterning, a non-numeracy math content can be predictor of later mathematics achievement (Rittle-Johnson et al., 2016).

During free play, toddlers show understanding of spatial skills and thinking (Uhlenberg & Geiken, 2020).

Preschool children are capable of engaging in geometrical thinking (Oughton et al., 2022).

**Math is far more than just adding and subtracting or counting. Math includes geometry, spatial reasoning, measurement, and patterning.**

**What Can I Do To Cultivate STEM Experiences for ALL?**

1. **The interaction between parents and their children (e.g., math talk) provides children with opportunities to engage in math learning in a naturalistic context, such as mealtimes, (Susperreguy & Davis-Kean, 2016).**

2. **Natural outdoor environment provides an ideal setting for children to learn about science by asking questions and investigating the surrounding (Skalstad & Munkenye, 2021).**

3. **Loose parts can be used to support students' engagement in STEM learning experiences (Carla et al., 2022).**

**STEM Learning Opportunities and Experiences Are Everywhere, and Most Often Are Completely Free of Charge. Adult-Child Interactions, Not Toys, Are Critical in Supporting Children's Development Across All Domains of Learning.**
Cultivating STEM learning opportunities for ALL young children throughout their daily routines and activities in any environment.

**WHAT CAN I DO TO CULTIVATE STEM EXPERIENCES FOR ALL?**

1. **Infants and toddlers are natural explorers. During the first two years of life, they learn and develop fundamental STEM skills (e.g., critical thinking, problem-solving, making predictions) through exploring and interacting with people and objects in their environment.**

2. Play, exploration, and daily activities provide toddlers with opportunities to learn STEM concepts (e.g., problem solving, number, counting; Reikerås et al., 2012).

3. Infants and toddlers have opportunities to build math skills when families use early math and number talk within daily routines and activities (Leech et al., 2021).

4. During free play, toddlers show understanding of spatial skills and thinking (Uhlenberg & Geiken, 2020).
